

Did You Know...

On the most basic level, human beings and robots are made up of the same major components!

- A body structure that contains a muscle system and a power source to activate the muscles and sensors.
- A sensory system that receives information about the body and the surrounding environment.
- A brain system that processes sensory information and tells the muscles what to do.

Of course, we also have some intangible attributes! Such as intelligence and morality, but on the sheer physical level, the list

Are there things that robots have that we do not? Find out in our next series of
